CD Emulation History

- Old emulator: 16-bit, DOS
- Script writing was a black art
- Updating image was slow and problematic
- No NT support
- Indecipherable feedback

Overview of new emulator

2 models of emulator available:

- DTL-S2900: External unit connected to PC via PCI SCSI controller
- DTL-S2910: Internal board is ISA PnP. Designed to fit into the ISA slot of the old emulator (DTL-S2020)

Overview of new emulator

- PnP installation - no jumpers
- Advanced Windows 95/NT-based CD emulation system
- Removal of all significant image build processing

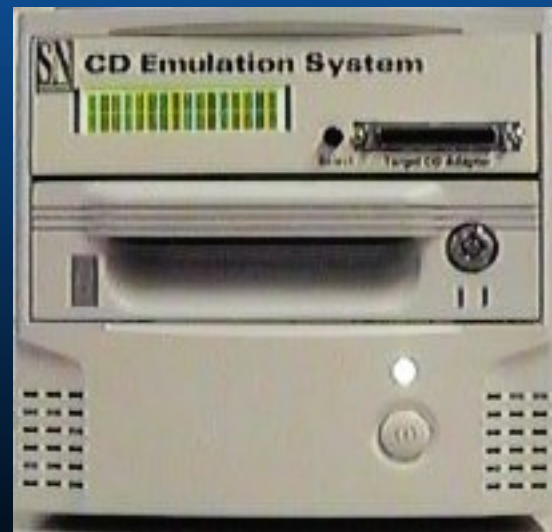

Overview of new emulator (2)

- Supports Win95/NT drag & drop
- Background file-copy processing
- Option to automatically cut a CDR disc

CD Emulation hardware

External CD Emulation unit (DTL-S2900)

- At the top is the Emulation hardware providing feedback via the LCD
- Below this is the removable drive bay

Hardware features

- Dedicated (Windows-independent) micro-controller
- 2 SCSI buses

In addition, external unit (DTL-S2900) has:

- LCD display
- Control button to select new CD image
- Removable HDD bay

Hardware features (2)

- Targets: DTL-H2000/2500/2700
- Support for SCSI HDD's, removable drives (jaz) and approved Sony CDR's
- Internal unit (DTL-S2910) also provides support for IDE drives

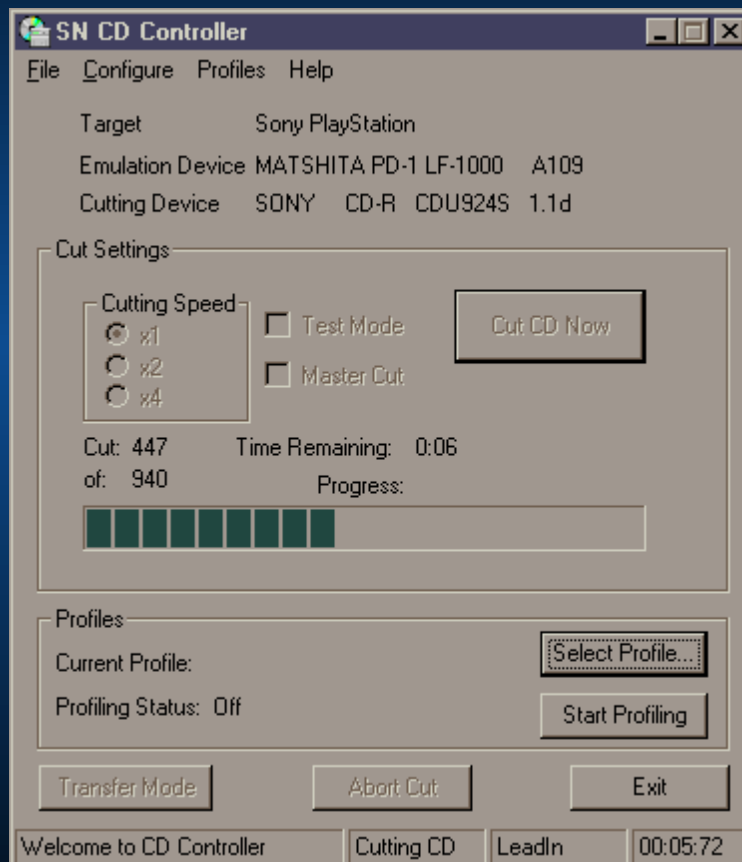

Windows CD tools

- CD Controller for feedback, control & cutting
- CD Explorer for image creation & maintenance

CD Controller

- Provides real-time feedback when emulating or cutting
- Ability to select alternative CD image
- Management of μ -controller BIOS

CD Controller: Cutting

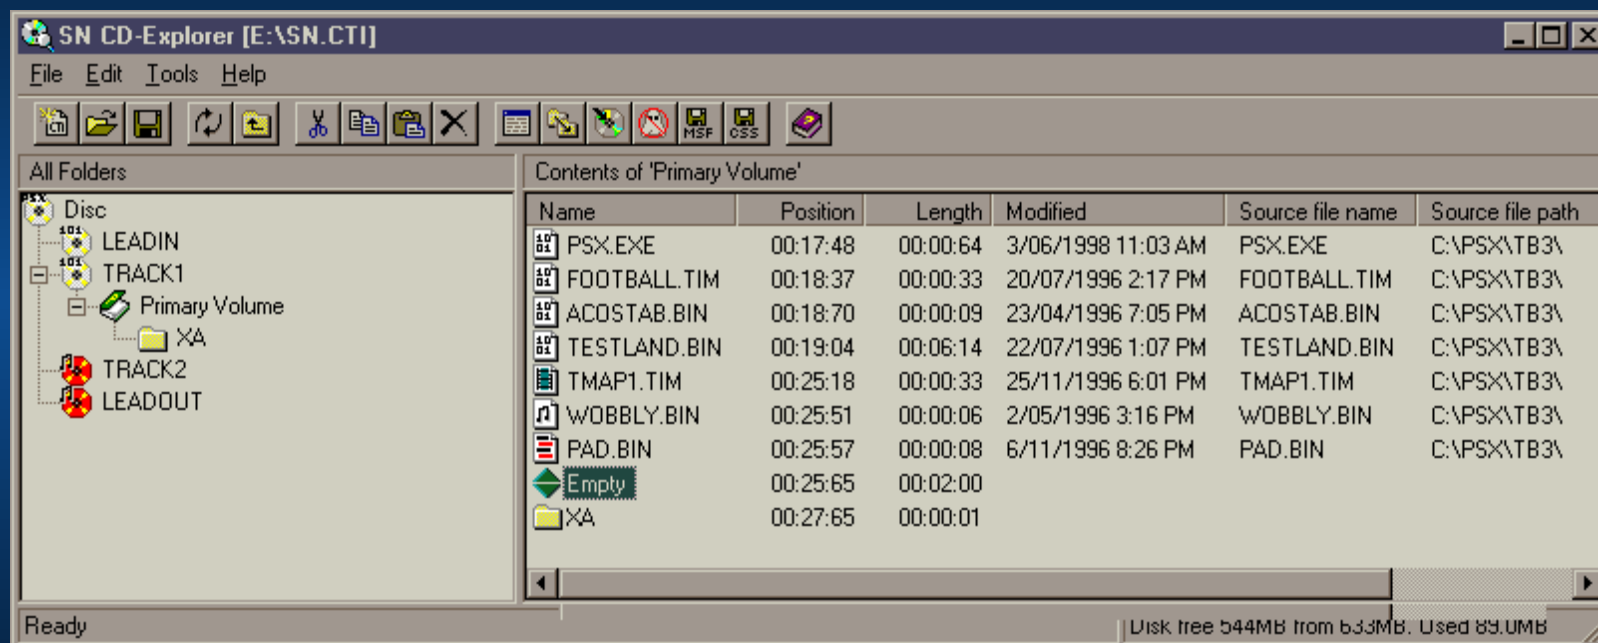

CD Explorer

- CD image management
- Windows Explorer-style GUI
- Full drag-and-drop support
- Background file copying

CD Explorer

- Automatically refreshes image when source files are modified
- Ghost hunt for lost files
- Support for ISO-9660 standard
- Extended support specifically for PlayStation
