

XM (Extended MOD) Player.

Coding by Jason Page at
SCEE.

Available to all licensed
developers.

What is the XM Player ?

- A new music and sound effects player for the PlayStation.
- Uses existing composition tools available on the PC (and Mac?).

So, Why bother?

- More games using chip music.
- MOD's make the most out of chip based music?
- More detailed control over sound effects .

Overview:

- Playback XM tracker modules.
- Play up to 24 channels.
- 95% of commands functional.
- Many sample effects.
- Playing of sound effects.
- Independent volume control over individual channels. (Interactive!)

Overview:

- Sorry - you can work out how to write MOD files yourselves!
 - I use Fast Tracker 2.

Sample Effects:

- Volume.
- Panning.
- Pitch bend.
- Arpeggio.
- Portamento.
- Vibrato.

Sample Effects:

- Amplitude AND panning envelopes.
- Modify sample start offset.

Sound Effects:

- Plays selected channels of a single pattern.
- Single or multi channel SFX with one call..
- Allows use all of the sample effects.
- Allows more use of a single sample.
 - (Explosion used for a laser etc.)

Usage:

- Uses the LibSPU library only.
 - Key On, Set Volume, Set Pitch, Get Key Status.
- Initialising SPU is left up to the user.

Usage:

- Calls included:
 - Initialise VAB and XM.

- Calls included:
 - Initialise VAB and XM.
 - Play, Stop, Pause, Restart XM.

Usage:

- Calls included:
 - Initialise VAB and XM.
 - Play, Stop, Pause, Restart XM.
 - Set individual channel volumes.

Usage:

- Calls included:
 - Initialise VAB and XM.
 - Play, Stop, Pause, Restart XM.
 - Set individual channel volumes.
 - Get current song status.

Interactive:

- Calls included:
 - Song jump to user specified position

Interactive:

- Calls included:
 - Song jump to user specified position
 - Position picked up at end of current pattern

Usage:

- Not meant to replace LibSPU or LibSND.

Usage:

- Not meant to replace LibSPU or LibSND.
- Main update routine called once every 50/60 fps.

Usage:

- Not meant to replace LibSPU or LibSND.
- Main update routine called once every 50/60 fps.
- No interrupt used:
 - Set up your own interrupt.
 - `VSynCallback(XM_Update);`

Usage:

- Maximum 8 XM files initialised at once.

Usage:

- Maximum 8 XM files initialised at once.
- Fast(?) processing time.
 - Between 1 - 2 Scan lines per channel

Initialise the player:

```
XM_OnceOffInit(XM_NTSC);  
VABID=PSX_Init(VAB_Header,VAB_Body);  
InitXMData(XM_Address,  
            XM_ID,  
            XM_UseXMPanning);  
VSyncCallback(XM_Update);
```

Playing Music or SFX

```
Song_ID=XM_Init(  
    VAB_ID,  
    XM_ID,  
    First_SPU_Channel,  
    XM_Loop,  
    Bit_Mask,  
    XM_Music,  
    SFX_Pattern / Song_Start_Offset);
```

XM2PSX Conversion tool:

- Windows based tool.
- Create VAB file.
 - Recreate Single/Looping and/or Ping-Pong samples.
- (Still need to VABSplit the file)
- Output samples as VAG's.

XM2PSX Conversion tool:

- Create a new XM file.
 - 1) Original XM file without sample data.
 - 2) Super compressed XM.

Future updates to include:

- Reverb effects.
 - Modify depth, turn reverb on/off for individual channels.

To Conclude:

- Outstanding chip music.
- Original sound effects.
- Fast Processing.

Thankyou...
